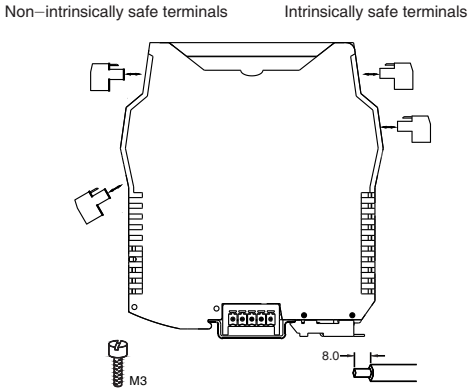
Connections

(1). This barrier adopts knock-down connector with screw terminals. The intrinsically safe(IS for short) terminals (blue plugs) should be connected to hazardous area devices and the non-IS ones (green plugs)to the safe area devices.
(2). Choose for the harzardous area the blue-marked wires. Its minimum cross section area should be 0.5 mm^2,and minimum dielectric strength should be 500V.
(3). The wirings in safe area and hazardous area must be separated, and both have protection bushes.
(4). A length of 8mm bared wire is locked by the M3 bolt. See as shown below.

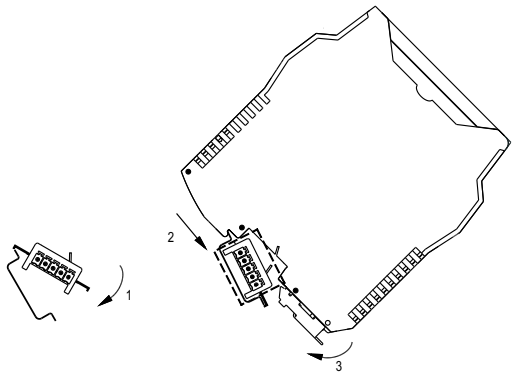


Installation

The isolated barrier should be located at safe area, according to the related requirements in IEC60079-17(EN60079-17)and IEC60079-19(EN60079-19).

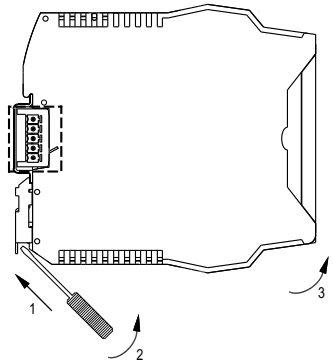
GS8500-EX series isolated barrier are designed for mounting on 35mm DIN guide rail.

Installation according to the following steps:
(1). First make the bus-powered outlet locked into the guide rail;(If no bus-powered function,omit this step);
(2). Make the upside of the barrier locked into the guide rail;
(3). Push the downside of the barrier in the rail.



Disassembly

(1).Insert a screwdriver (its edge length≤6mm)into the downside metal lock of the barrier;
(2).Push the screwdriver upwards,then prize the metal lock downwards;
(3).Take the barrier out of the guide rail.



Maintenance

(1).Before using, please check again whether the module's Ex-proof rating accords to the operation conditions, and also wiring and polarity are correct.
(2).It is disallowable to test insulativity among the terminals with a megameter. If necessary, the wires must be cut off before testing ,or the internal fuse would blow.
(3).Every product has been test strictly before leaving factory. If users find any abnormality in the module, please contact the nearest agent or our company.
(4).In 5 years from the delivery date, if the product works improperly during normal operation, we will repair or replace it without payment.

Summarize

Isolated barrier converters thermal resistance, thermal couple and potentiometer signal in hazardous area into 0/4~20mA or 0/1~5V signal. It is intelligent and has cold junction compensation function, RTD, TC, potentiometer graduation and range can be configured through computer. The product needs an independent power supply.Input circuit, output circuit and power supply are each galvanically isolated.

Largest external capacitance (Co) and inductance (Lo) numerical attention when using the following requirements:

(1) For distributed inductance and capacitance e.g. as in a cable, allow the values of capacitance and inductance;

(2) For circuits containing up to 1 % inductance or up to 1% capacitance with a cable, allow the values of capacitance and inductance;

(3) For connection of the combined inductance and capacitance where both are greater than 1% of the allowed value (excluding the cable), allow up to 50% each of the values of capacitance and inductance.

Intrinsic safety explosion protection loop system

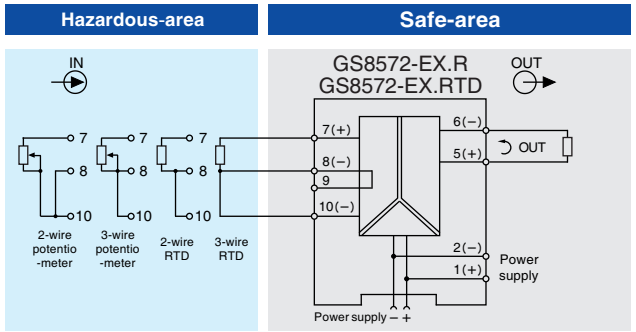
Special requirements have to be confirmed before using the intrinsically safe explosion loop system(intrinsically circuit) which connected by isolated barrier and intrinsically safe apparatus in field:

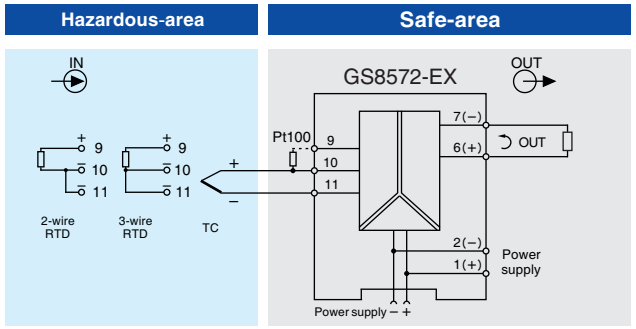
(1) The explosion level of intrinsically safe apparatus should meet the requirements of operation conditions. The apparatus should pass the explosion protection test and get the certificate by state-authorized explosion-proof product certification bodies.

(2) The intrinsic safety parameters of isolated barrier and intrinsically safe apparatus both are sure, and comply with 12.2.5 of GB 3836.15-2000.

(3) If any parameters are unclear, the system has to be confirmed by stateau thorized explosion-proof product certification bodies.

Application





Note:2-wire connection can not erase lead resistance, error increases.
